

Searching and Manipulating Data in Excel

WORKING WITH DATA IN EXCEL

Pratheerth Padman
FREELANCE DATA SCIENTIST

Course Pattern

Introduction to the
topic or type of action

Reasons for
performing said action

Practical
implementation

Module Overview

Data validation

What-if analysis

Text-to-Columns tool

Flash fill tool

Data Validation in Excel

Data Validation

Data Validation in Excel lets you control the data that can be entered in a cell.

Data Validation Scenarios

Restrict data to
certain
numbers/text/data

Inform user whenever
out-of-range data is
entered

Guide user on what
data to enter

Data validation can be easily defeated.

If a user copies data from a cell without validation to a cell with data validation, the validation is destroyed / replaced

Demo

Data validation scenarios

What-If Analysis

What-If Analysis

What-if analysis is an Excel tool that lets you explore results of different scenarios by using several sets of values in one or more formulas

Types of What-If Analysis Tools

Scenario Manager

Data Table

Goal Seek

Demo

Executing a what-if analysis – Scenario Manager

Demo

Executing a what-if analysis – Data Table

Demo

Executing a what-if analysis – Goal Seek

Text-to-Columns Tool

Text-to-Columns Tool Overview

**Separate text data
from a single
column to
separate columns**

**Works with two
types of text data**

**Delimited and
fixed width**

Extract or Combine Data with Flash Fill

Flash Fill Overview

**Smart tool – identifies
patterns**

Extract or combine data

Limitations of Flash Fill

No formulas used – static result

Cannot always correctly identify patterns

Summary

Data validation scenarios

Three kinds of what-if analysis with demonstrations for each

Splitting two types of text data into multiple columns with text-to-columns

Extracting and combining data with flash fill
